

## SS SUPREME COVER CROP BLENDS

---

### SS SUPREME SOIL COVER MIX

**DRILLED 25 LB. / ACRE; BROADCAST 30 LB. / ACRE**

An economical cover crop blend that will establish quickly and will winter kill for easy termination. Works well when used in conjunction with manure, bio solids or other high fertility situations.

**Contains:** Oats and Fragiblaster Radish

---

### SS SUPREME N-BOOST MIX

**DRILLED 20-25 LB. / ACRE; BROADCAST 25-30 LB. / ACRE**

An all-purpose mix that will work well planted after cereal harvest.

Establishes quickly, works well to scavenge nutrients and will also provide some nitrogen credits.

**Contains:** Oats, Fragiblaster Radish and Crimson Clover

---

### SS SUPREME MULTI-SPECIES MIX

**DRILLED 20-25 LB. / ACRE; BROADCAST 25-30 LB. / ACRE**

A diverse mix that will provide flowers to attract pollinators if planted early. Keep seeding rate low to give phacelia and crimson clover a chance to compete and flower. Works well after cereal harvest for fall cover.

**Contains:** Oats, Forage Peas, Crimson Clover, Fragiblaster Radish, Sorghum Sudangrass, Sunflowers and Phacelia

---

### SS SUPREME SOIL SAVER MIX

**50-60 LB. / ACRE**

Hairy vetch is not always winter hardy in southern Ontario but the addition of fall rye can help. The more growth in the spring, the more N produced by the hairy vetch for the following crop. Should be planted by early September to allow the hairy vetch to establish before winter.

**Contains:** Fall Rye and Hairy Vetch

---

### SS SUPREME FALL GRAZE MIX

**DRILLED 40 LB. / ACRE**

A diverse mix that will provide fall grazing, ideally plant in midsummer and fertilize to maximize potential growth. Have a plan to terminate the Italian ryegrass to prevent unwanted seed production if allowed to over winter.

**Contains:** Oats, Italian Ryegrass, Hunter Brassica, Berseem Clover and Pearl Millet

---

### SS SUPREME CORN INTERSEED MIX

**DRILLED 8-12 LB. / ACRE; BROADCAST 12-15 LB. / ACRE**

Plant at V4-V8 corn leaf stage, lower seeding rates can work if the seed is actually planted into the soil.

Keep in mind herbicide restrictions and have a plan to terminate the annual ryegrass.

This mix helps to support wheel traffic of silage equipment and is an excellent forage to extend the fall grazing season.

**Contains:** LowBoy Annual Ryegrass and Crimson Clover

---

## Custom Mixing Available

Don't see a mixture that appeals to your needs? Our Forage and Cover Crop specialists will help you to select the best varieties to formulate a forage or cover crop mixture specific to your needs and goals, creating high quality blends for local soil and climate conditions.

# EVERY SEED. EVERY ROOT. EVERY PLANT.

Speare Seeds provides innovative solutions that enhance soil health and improve crop production and profitability. Our principles of soil coverage through living root growth throughout the year, creates minimal soil disturbance and increases water infiltration and water holding capacity.

*We are the root to your success.*

*A deep-rooted radish purposed in breaking through hard sub-surfaces, increasing water permeation, forming root channels, all the while capturing excess nutrients and suppressing weeds.*

## Benefits:

- Capture Unused Nutrients
- Breakup Soil Compaction
- Increase Soil Biology
- Build Soil Health
- Natural Weed Suppression
- Reduce Erosion

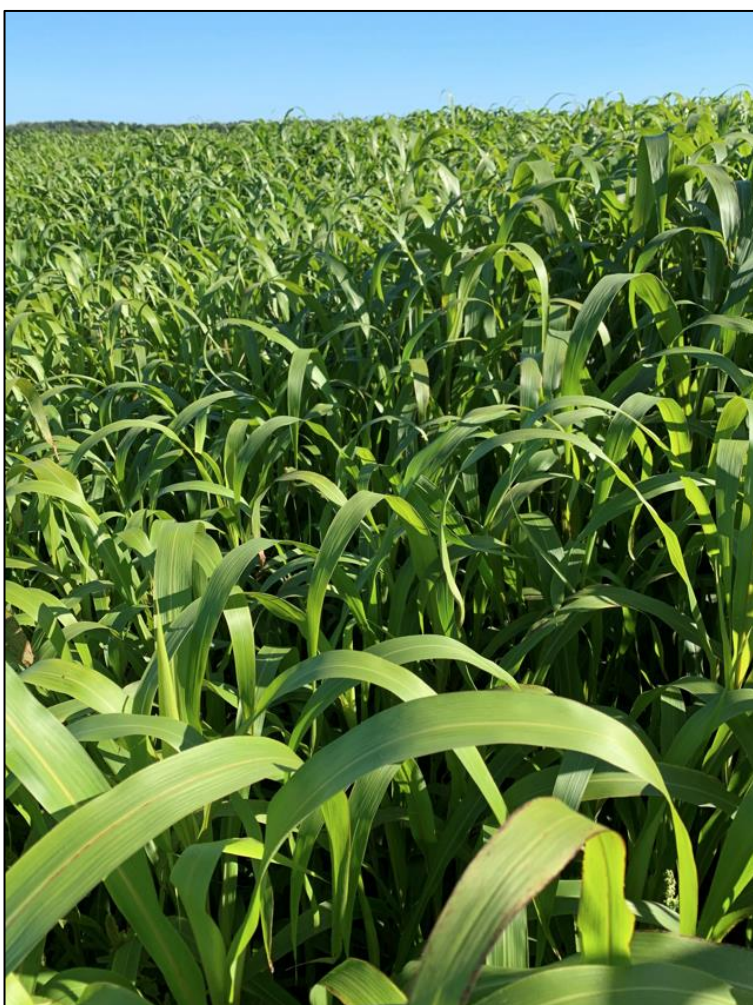

## Seeding Rate:

Broadcast: 4 – 5 lbs. / acre in mix

Drilled: 2 – 4 lbs. / acre in mix

Precision: 1 – 3 lbs. / acre in mix

## ANNUAL FORAGES AND COVER CROPS AVAILABLE

- |                      |                      |                        |
|----------------------|----------------------|------------------------|
| Austrian Winter Peas | Groundbreaker Radish | Sunflower Seed         |
| Berseem Clover       | Hairy / Common Vetch | Fragiblaster Radish    |
