Environmentally-friendly product packaged in a compostable and biodegradable bag. It contains 100% certified seed and grows in full sun and shade.

## Help Save the Environment:

Environmental Turf Mixture is an all natural mixture containing a blend of fine fescue grasses. It reduces the need for fertilizers as it forms a thick turf even under adverse conditions. Reducing your mowing time will help lower the harmful emissions from your lawn mower. With its fine blades of grass, unlike other lawn mixtures, Environmental Turf Mixture requires less watering. There is a greater need to reduce our water consumption as changes in the climate have created more frequent dry weather conditions.

**Also included in the Environmental Turf Mixture:** an endophyte enhanced turfgrass variety; a biological pest control for turf. Endophyte is a naturally occurring organism which helps to control chinch bugs and other insects. This is another environmentally-friendly way of caring for your lawn as endophytes reduce the need for pesticides.

## Save Your Time:

Environmental Turf Mixture creates a slow growing fine textured turf. This characteristic means that you don't have to mow your lawn as often. You can also leave your lawn uncut for the season and the fine grass blades of the Environmental Turf Mixture will cause the grass to fall over to approximately 4 inches in height. This will create a graceful flowing appearance of your grass blades. Occasional mowing will be necessary if you prefer a 'groomed' lawn appearance. Your lawn also requires less watering. This is very important if you live in an area that has water restrictions or experiences a hot, dry summer.

## Save Money:

This natural growing mixture will reduce the need to purchase chemically-based fertilizers and pesticides. Cutting your lawn less often saves money spent on gasoline for your lawn mower. Since Environmental Turf Mixture seldom needs watering; you are saving on the amount of water you use.

## Benefits

- Reduces mowing frequency
- Environmentally friendly product
- Environmentally friendly bag
- Low maintenance lawn
- Less watering required (drought tolerant)
- Establishes the same as regular grass seed
- Winter hardy
- Less vulnerable to grubs due to fescues, endophyte-enhanced varieties and less watering
- Reduced requirement for fertilizers and chemicals

## Best Suited For:

- Low maintenance areas
- Cottages
- Drainage ditches - that you don't want to cut
- Salt tolerance areas - hard fescue is quite salt-tolerant
- Traffic Control - used as a grass border to direct traffic flow in parks and walkways

**Seeding rate:** Seed at 7 pounds per 1,000 sq. ft.

**Available in the following bag sizes:** 1.5kg (environmentally-friendly bag), 25lbs. and 55lbs.
