

# Self Repairing Perennial Ryegrass

Improving your property with SRPR

A creeping perennial ryegrass, SRPR outperforms traditional perennial ryegrass. It's also more resilient and weather tolerant. Because SRPR is chosen for top professional sports venues, it could be an ideal choice for sports field, golf course, lawn or landscape.

Speare Seeds has taken the top SRPR and added our own top proven Perennial Ryegrass to make our mixture, Turf Genius® Self Repairing Perennial Ryegrass Mixture, even more successful and better suited for the Canadian climate.

## **SRPR thrives under tough conditions, expanding even in high stress areas**

It is SRPR's regenerating ability that separates it from traditional perennial ryegrass. A product of advanced conventional breeding techniques, SRPR has the ability to spread and regenerate. As it spreads on the surface of the ground new plants will develop and grow.

## **Exhaustive Research – Remarkable Results**

SRPR performance has been tested intensively at different research universities where it was analyzed for fundamental characteristics including wear tolerance. The results: SRPR is vastly superior on wear tolerance compared to any other perennial ryegrass. The turf quality also remains high, even under the heavy wear.

## **BENEFITS of Self Repairing Perennial Ryegrass**

- Perennial ryegrass with the ability to spread
- Extremely wear tolerant
- Deep green colour
- Excellent for all high traffic areas
- Contains beneficial endophytes that:
  - increase disease resistance
  - increase insect resistance
- Makes your field/lawn look and perform better
