

PLH 2000 Brand Alfalfa

The latest innovation in Potato Leafhopper Control

PLH 2000 Brand Alfalfa offers you the latest genetic resistance to the Potato Leafhopper plus improved agronomic traits. The forage quality of PLH 2000 is equal to some of the top varieties on the market today.

PLH 2000 is highly resistant to several pests as outlined below. It has good spring vigor and winter hardiness. With a fall dormancy rate of three, PLH 2000 is ideal for growers who want genetic protection against potato leafhopper injury via the glandular hair trait. Good performance can also be expected for seasons or cuttings when potato leafhopper injury isn't a limiting factor.

PLH 2000 Brand Alfalfa has a dark green plant color and a semi upright growth habit. Medium late maturity to 1/10 first crop flower and slower than non-glandular haired alfalfas for recovery after harvest. This brand has excellent forage quality. Best adapted to 2 or 3 cut harvest systems and medium rotations. Not recommended for grazing.

PEST PACKAGE

HR = Highly resistant

Bacterial wilt	HR
Verticillium wilt	HR
Fusarium wilt	HR
Anthrachnose	HR
Phytophthora root rot	HR
Aphanomyces root rot	HR
Potato Leafhopper	HR

*Please note that insecticide application may still be necessary to obtain maximum yields when Potato Leafhopper populations exceed economic threshold levels.
