

Sweet Six BMR 6 Dry Stalk

SORGHUM-SUDANGRASS
(Sorghum bicolor X Sorghum Sudanese)

- **Significant increase in Digestibility**
- **Significant increase in Palatability**
- **Significant increase in Efficiency**

This hybrid produces a high tillering high quality forage that has excellent early vigor. The high leaf to stem ratio means that you can count on high protein. The digestability of this hybrid has been increased by 20% due to the BMR 6 trait. With the dry stalk gene it allows a more timely harvest and helps to get the crop baled and out of the field before it gets rained on while drying. Typically this hybrid is used in a rotational grazing or 1-3 cutting system allowing you to produce the maximum amount of forage.

Disease/Insect/Nematode Ratings:

Anthracnose:	R
Downy Mildew:	MR

Agronomic Traits:

Early Seeding Vigor:	Good
Growth Habit:	Upright
Recovery After Cutting	Very Good
Maturity:	50-55 days to boot
Harvest:	45-55 inches
	or when crop is at 50% boot stage

Uniformity:	Good
Plant Color	Purple
Midrib Type:	Brown

Planting Rates:

Bushel weight:	56 lbs.	
Seeds per Pound:	16,000	
Rate (Lbs.)	Dryland	Irrigated
	10-30	12-60
Seeds/Sq. Ft.	5-14	5-26

Adaptation Ratings:

Photosynthetic Type:	Warm Season
Photoperiod:	Insensitive
Soil Temperature:	Warm (62°)
Water Requirement:	Low

Crop Use Information:

Life Cycle:	Annual
Ease of Establishment:	Good
Drought Stress:	Good
Minimum pH	6.0
Hay:	Excellent
Silage:	Excellent
Rotational Grazing:	Excellent
Palatability:	Excellent

Technical Description
