

# What to Expect From Plantae Mulches

A decision has been made to use Plantae Environmental hydromulch on this project.

## That's good news for you, the installer!

Improved Plantae product mixing and application efficiency are going to make installation easier, faster and more profitable.

This is a **new product** and is **designed to be different**, please EXPECT 3 things to be different:

## 1. EXPECT more product in the tank

6 - 7 bales in 500 gallons water  
12 - 14 bales in 1000 gallons water

19 - 21 bales in 1500 gallons water  
40 - 42 bales in 3000 gallons water

## 2. EXPECT the product to look different on the ground

The new fibres sit close to the ground by design. While they may not be as visible as you expect, the fibres are there and doing the work. Ensure you are covering the correct area and not using too much product. Use this QR code to see the full loading and coverage chart.

## 3. EXPECT the product to be GOLDEN and STAY GOLDEN

### The mulch is not green

As a company we believe in doing the right thing for the environment at every possible opportunity. This includes not using dyes.

**Installers who have sprayed dyed products for years report that seeing where all-natural mulch is sprayed is not difficult and quickly becomes comfortable.**

### Inspections are made easier

Inspectors can easily see the natural golden mulch on the ground. The golden colour stays longer than the green colour of traditional mulch giving the inspector more time to get to site.

### Stays Golden

Natural golden mulches have the additional benefit of staying golden for weeks, ensuring that inspectors have more time to visit the site and ensure the correct application has been installed.

**Here to help** Please reach out to us through your Distributor, or directly. We will do our best to meet you on a video call ASAP to help make you more successful than you expect!
