

XTR WINTER TRITICALE

SS Supreme Cover Crop Seed

XTR Winter Triticale is a cross between rye grain and wheat. The benefit of this cover crop is combining the overall tonnage of cereal rye and the increased feed value of wheat. XTR winter triticale combines two top performing varieties for maximum forage yield and extreme winter hardiness. It makes a great cover crop for fall and winter grazing for late pasture extension beyond brassicas and cool season perennials. It also creates a great cover over winter for Spring forages ahead of next year's rotational crops.

- Seeding rate 75 - 100 lbs per acre
- Excellent winter survival
- Superior disease resistance
- 50/50 blend of high quality grain and forage winter triticale
- Provides great combination for high forage yield and forage quality
- DM Tons/Acre 2.5 - 4
- Graze/Baleage/Chop
- Crude protein 13 plus
